Imagine shops, restaurants, cinemas, botanic gardens, a golf course and an indoor beach, not in a city, but under a tent.

When we harness the power of technology and design, there is no limit to what we can accomplish.

Covering an area larger than 10 stadiums and towering 150m high is the Khan Shatyr Entertainment Centre in Astana, Kazakhstan. But this is no ordinary structure – the Khan Shatyr is a tent. Besides being the world’s largest tensile structure, remarkable engineering and design allow it to withstand the region’s extreme temperatures and maintain a cool summer climate inside, providing an oasis for the people. Visit www.sutd.edu.sg to find out how Technology and Design can help you build a better future.
